

# Brezza Chair Standard Features

## The Brezza Series chairs come standard with the following features:

- **Contoured, Breathable Mesh Back** for lightweight comfort, support, and sleek appearance. Retains breathe-ability even when covered with fabric, leather or perforated leather.
- **Height Adjustable Lumbar Support System** encourages optimal posture and helps relieve lower back pain.
- **Adjustable Back Angle** function allows the user to easily change the back angle while seated in the chair.
- **Height and Width Adjustable Arms** to relieve shoulder stress and provide support for any size user.
- **LIFE-Foam™ Memory Foam Arm Pads** relieve pressure while adjusting to suit every activity.
- **Contour Seat** is shaped to the body's natural curves to provide support where you need it.
- **Life-Foam™ temperature and pressure sensitive memory foam seat** to reduce pressure and improve circulation.
- **Adjustable Seat Height** adjusts quickly to suit any size user or desk height.
- **Multi Function Control Mechanism** provides easy to use, fully ergonomic function, smooth movement and years of reliable comfort.
- **Centre Tilt Control with Spring Tension** for ease in tilting and reclining. Center tilt allows the seat pan to tilt with the back, so that you don't slide forward in the seat as you recline.
- **Tilt Tension Control** allows user to adjust the tension to suit their weight and size. Once set, there is no need to readjust your personal setting.
- **Variable Tilt, Tilt Tension, and Infinite Tilt Lock Functions** allow the user to freely tilt forward and backward, or lock the chair into any position. Frequent movement and changes in position throughout the day help to alleviate disc pressure and reduce fatigue.
- **Forward Tilt and Forward Tilt Lock Feature** Using the forward tilt activates leg muscles, which stimulates circulation, and reduces stiffness. The lockout feature allows you to prevent your chair from tipping too far forward when the free float function is in use.
- **Five star base with fiberglass reinforcement** for strength and stability.
- **55mm Dual Wheel Hooded Soft Wheel or Hard Wheel Casters** for smooth operation in any application.
